

Will the broadcast flag interfere with consumers ability to make copies of DTV content for their personal use, either on personal video recorders or removable media?

How dare you take away my right to choose.

Would the digital flag interfere with consumers ability to send DTV content across networks, such as home digital networks connecting digital set top boxes, digital recorders, digital servers and digital display devices?
Choosing is a freedom we all deserve.

Would the broadcast flag requirement limit consumers ability to use their existing electronic equipment (equipment not built to look for the flag) or make it difficult to use older components with new equipment that is compliant with the broadcast flag standard?

I don't intend to buy a fancier tv at the moment becasue I can't afford it.

Are you going to pay for me to buy a new one?

Would a broadcast flag requirement limit the development of future equipment providing consumers with new options?

Again I see choice as the issue here.

What will be the cost impact, if any, that a broadcast flag requirement would have on consumer electronics equipment?

Cost is always passed onto the consumer. Buzz off.

Other Comments:

I have the right to freedom of choice. You have no right to take that away from me or anyone else. But then you can buy anything in this world for money.
